***Drawings***

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ouchi (6,245,078).

Ouchi provides a polypectomy snare device that includes a control handle (not shown) and a wire component (2,3,4) that includes a proximal end connected to the handle (not shown) and a component (2,3) slidably disposed within an outer sheath (1). The outer sheath has a non-planar tip surface. The non-planar surface includes a plurality of teeth (5) that are integral with the sheath. Ouchi provides various variations in the shape of the teeth, including one embodiment whereby the outer sheath (1)

includes a planar tip and a cap member (10) including the spike/teeth members (5) are attached to the planar tip (see Figure 7).

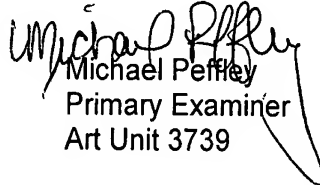

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Itoh (3,791,387) discloses a loop device where a plurality of teeth extend from an outer sheath (see Figure 1). Komiya (4,311,143) discloses a polypectomy device where the sheath has means at the distal end for treating tissue grasped by the snare member.
